Article Body:

Creating your own web site or page on the Internet can be easy when using a web builder. There are many templates available for people to choose from, and all they have to do is upload their own text and pictures into their chosen template, often using an easy web builder. But to make your own site stand out, it is important to have your own unique design.

Because the skill level of people using the Internet varies, from professional site designers to those who are happy with pointing and clicking, it is important for any company that features hosting services to provide a variety of packages, often including an easy way for individuals and small businesses to design their own site.

ABI Hosting can provide an easy web builder for anyone to use. Even those used to HTML and writing their own code will appreciate the ease of this program, which allows people to see what they are doing as they are doing it, rather than writing out strings of commands and hoping that each item will turn out exactly where you want it. This makes it easy to customize a web site, whether it is a family memories themed site, or a business selling products over the Internet, and can be completed in five quick steps.

While you want your site to be unique, and it can be easy to add extra items

with a web builder, you also want it to be easy to read and appealing. Here are a few tips:

- * Avoid using too much movement. A lot of flashing images or words moving across the screen can be distracting and difficult to read.
- * Be sure to have contrast. Dark letters on a light background, or light letters on a dark background.
- * If there is a lot of content on a particular page, use borders or boxes to help readers keep track of what they are reading.
- * Choose basic colors, and use a few other colors for contrast. Too many colors can be distracting to the eye.

Once you've designed your site, you need to have a way to get people to find it. For many industries, there are chat rooms and forums where members of those industries meet. Join a few, and make insightful posts, with your web site in the signature. Or join forums where you think your customers might be - if you are selling yarn, you might comment in a crochet forum. You can also place ads on other web sites, either by buying space or through programs such as Google Adwords. Building traffic can take time, so the sooner you get your site up and running, the better.

A hosting service with a simple and flexible web builder can get your site onto the Internet quickly, but with high quality results. This will allow you to spend your time focusing on other aspects of your business. The Internet is also a great way to grow a business, both as an advertising method and as another way to sell to your customers.
