Want to extend the life of your notebook computer? Here are some quick tips to keep your laptop safe and secure during use or travel...

Keywords:

cell phones, laptop, ipod, jewelry, electronics, pet supplies, games, toy, notebook

Article Body:

Laptop computers - also known as notebook computers - have become an important part of our lives. They are more affordable than ever and as popular as cell phones. A laptop computer has a versatility that the home PC does not provide. With its smaller size it is portable and easier to carry along. This makes it convenient to use in many situations. You can take it to work and back home as well as take it on more extensive travel.

Laptop computers are not just for older working people anymore. Because of its ease of use, more young people are using them for school and college. They can access the Internet almost anywhere and provide updates for work, research, and even games.

Taking Care of Your Laptop or Notebook Computer

It is important to take care of your laptop computer and protect it from accidents. They are designed for heavy use but common sense will tell you that you need to be prudent in your treatment.

One of the first recommendations is to buy a case designed for a notebook computer. These are made with padding to protect your laptop computer from wear and tear and protection in case you drop it. It is not good to carry your notebook computer unprotected or in a purse or backpack. You can easily find a case by shopping online where you will find 1000s of products to choose from.

Another important tip for laptop computer care is to keep food and drinks away from it. Even a small amount of liquid is enough to ruin the delicate components

in the laptop computer. It means almost certain replacement, and most warranties will not cover it. It is not worth the risk to lose all your data.

Protect Your Notebook Computer

When using your laptop computer you should always use a surge protector. An electrical surge may not hurt it one time, but continued surges could destroy it. If you are using a cable or dial-up modem during a storm, be sure to unplug it. Lightening can travel through phone lines and ruin the laptop computer.

You should not leave your notebook computer in a cold environment. This can cause condensation when you return it to a warm area and could cause the circuitry to short it out. If it has been in the cold, let it warm up before turning it on.

When traveling with your laptop computer, be sure to charge all your batteries before you leave. You might not know when you will be able to charge them again. On a long trip, take extra batteries to avoid this problem. By shopping online, you can find the supplies you need as well as other products such as iPods, jewelry, games, toys, sporting goods, pet supplies and cell phones - even free gifts.

Do not leave your notebook computer unattended and do not check it as baggage when flying. Keep it in your hands at all times to avoid the possibility of theft. Don't try to disassemble or repair your laptop computer; this is a job for professionals. You may inadvertently cause more damage by your lack of knowledge.

Shopping Online

When you are ready to buy a laptop computer, cell phone, iPod, or other electronics, shopping online will provide everything you need.
