**Article Body:**

Are you dissatisfied with your Internet service provider? Do you wish to get BT's broadband access? If you say yes, it is easy to switch from current ISP to other broadband service provider. Lot of provisions is available to switch over from one ISP to other. What is the need of choosing BT broadband? This question may come to your mind. It is because BT is one of the leading broadband providers which have 3 million subscribers from the year 1999.

Distinct options are offered as packages for distinct type of users. First make clear of your option and then you have to inform your current broadband provider regarding this cancellation of their broadband service. Then they have to give details regarding your MAC. MAC is nothing but a code which is vital for transferring from your current broadband provider to the new one while you change your provider.

**How to get MAC?**

This is a mandatory one as per law. This "Migration Authority Code" is essential for authenticated transfer of access. If your old contract has not ended, you have to wait for the expiry date of the old contract. Then only your current service provider will give you the MAC.

**When you get MAC?**

It is their duty to give the MAC within 5 days from the date of your request. It is possible to order BT broadband service through on-line. You may have to spend at least 2 to 3 minutes to order through internet. After you order, the service will be offered for you within 10 days.

How to get BT Networking?

BT home network is nothing but connecting more than two systems with each other to share internet. For which it has to use BT Home hub. Instead of BT hub the users may prefer router if required. There is no need to stand in queue to set up your network with the support of BT. BT offers home networks up to 10 systems.

It is possible to share internet within this 10 computers simultaneously. The ten system users can surf web or play games or check mails. It is possible to get the advantage of getting security features like free firewalls from BT itself. You can get the data transfer speed up to 5 times faster than before in your home network.
