Article Body:

Is your computer safe from a virus? You might say yes, but do you know that for sure. If you do not have anti virus protection installed you are leaving yourself susceptible to a computer virus. Trust me you do not want a virus on your computer. Depending on the virus it could cause some real damage to every aspect of your computer. A really harmful virus could completely disable your computer, causing the need for a new hard drive or even motherboard.

Your computer can become infected with a virus in a variety of different ways. Such as via email, downloads, or even hackers. Just visiting a certain website could give you a virus, if they have downloads that are unseen by the eyes. The only way to protect yourself from a potential harmful and costly computer virus is to install anti virus protection. This protection comes in the form of antivirus software.

This is the only way to protect your computer from being infected with a virus. What is great about some of this protection is that, thanks to the internet, you can find free antivirus software. Of course, not all anti virus scans are free, but great majorities of them are.

You may think that free antivirus software has only one function, to find and

rid your computer of viruses. While this is one of their functions, in most cases it is not the only one. Many of the latest antivirus software come with many other features that can help protect your computer while you are using it. For example, not only will some find and eliminate the viruses already on your computer, but it will also monitor your computer from that point on blocking any viruses that are coming in. Most will scan your downloads and email to ensure your computer remains safe and virus-free.

Most of the free antivirus software also scans and eliminates instances of annoying adware and spyware. Both of these work to slow your computer down and make your time on the computer a whole lot less enjoyable with unwanted popups and advertisements. Your best defense from a virus is good, solid, and reputable antivirus software.

You can find software and anti virus scans all over the internet. It is wise to choose your anti virus protection based on recommendations from other users, ease of use, price, as well as reputation. By doing so you will protect yourself from a computer virus and enjoy safety and peace of mind during your internet travels.
