Whether you are jogging, shopping at the grocery store, working out at the gym, or working, you are constantly seeing people listening to an MP3 player. If you do not have one yet, then you are behind the times. MP3 players are the best way to tote your music from place to place, and listen to it everywhere that you go. Now that you know you must go out and get an MP3 player as soon as possible, here are a few tips to consider when you are buying one.

Price - This is usually one of the most important criteria when you are buying any item, but the price of an MP3 player can vary greatly depending on the many features that are available on an MP3 player. You should try to maximize the amount of features you can get for the best price. Prices of MP3 players usually start around \$75 and go up to around \$1000 and sometimes even more. You can often find MP3 players for much less, though, during a sale or promotion.

Size - The size of an MP3 player can also vary greatly. The smaller the size of the MP3 player the more expensive it is, but other things like the type of memory can also cause the size of an MP3 player to change. If you must have a very small MP3 player, then you might have to give up some features that the larger MP3 players provide.

Screen Size & Clarity - The screen is also another very important aspect of an

MP3 player. The screen is where all of the song information will be displayed. Also if your MP3 player allows pictures or music videos, they will appear here as well. The more clear and larger the screen the more your MP3 player will cost.

Memory Type - The type and size of memory that an MP3 player has will determine the amount of songs the MP3 player will be able to hold. The memory type can also affect the way the MP3 player will react to movement. An MP3 player with an internal hard drive will be able to hold the most songs, but it will make the MP3 player larger, and also might skip if you go jogging, or work out at the gym while listening to it. Flash memory on the other hand will not hold as many songs, but the MP3 player will be very small, and it will not skip at all, even under the roughest conditions.

Battery Life - The battery life of your MP3 player is also very important, because you want to listen to your music, not sit and watch it charging. Some batteries will last for 4 - 5 hours, while others will last more than a day for your listening pleasure. You will also want to find out if the MP3 player uses an A/C adapter to charge, or if it can be charged by plugging it in to a USB port on your computer.

Accessories - Some MP3 players have a large variety of different accessories that will make it more stylish than anyone else's. Some common accessories are headphones, carrying cases, docking stations, and also necklaces to carry your MP3 player on. Depending on your fashion sense you might want to pick out an MP3 player with more accessories, so you can make sure that you stand out in a crowd.

Whether you go for the price as point for search number 1, or for the size as the most important factor, or for the memory type, or the accessories, at <http://www.discussMP3.com> you can be certain to find the new MP3 player you are seeking, and at the most discounted prices at that.
