Article Body:

It is a well known fact that Americans love their beer and desire nothing but the best from their beer. No doubt the large commercial beer manufacturers hold a considerable chunk of the beer making pie, but the number of home beer makers too has steadily been rising.

In fact, the popularity of home brewed beer has risen dramatically during the past twenty years or so, and custom made beers are more popular now than ever before.

Only Need a Few Hundred Dollars to Get Started

The American taste for beer is quite sophisticated and faced with an inexpensive as well as easy method of making home brewed beer has only stoked the fire of brewing beer at home. You may only require a few hundred dollars investment to purchase the required home beer making kits along with ingredients before you are well on your way to preparing homemade beer.

You can easily source home beer making kits from homebrew supply stores who

stock not only the kits, but also the required ingredients as well. Before you actually get stuck into brewing beer at home you should be well acquainted with the different home beer making kits available that each comes with different supplies.

At the very least, your home beer making kit must include vital items such as the brewing kettle that is usually made from stainless steel and is used to make the wort. You should select a brewing kettle size that can hold at the very least twice the amount of beer you wish to brew.

Another important piece of equipment that your home beer making kit should have is the fermenting container which holds the brew at the same time as the yeast performs its function. In addition, the container should allow the brewer to check the fermentation that is going on, and it should also have an airlock to let gases escape.

Your home beer making kit should also have a hydrometer which is a tiny probe whose function is to measure the wort's specific gravity while fermentation is taking place, and also before the fermentation process begins. A good thermometer is also necessary to check the temperatures between a low of sixty degrees Fahrenheit and a high of two hundred twelve degrees Fahrenheit at which point water begins to boil.

A very important facet of brewing beer at home is cleanliness and so you should ensure that your home beer making kit also has a sterilizer and it should also come with a racking cane, associated tubing as well as racking bucket - all of which help in transferring the fermented beer into a temporary location before it is actually bottled.

It is not unusual for home beer making kits to not contain bottles, caps as well as cappers which you will require for storing the fermented beer from the racking bucket into the bottles. With these pieces of equipment you should have no difficulty in brewing your beer at home.
