Choosing the right computer for you is something that you should not just take for granted. Note that your computer is one of your constant companions and will most probably serve as your partner in your work and in your studies. If your computer is less than adequate, you will probably suffer through a lot of inconveniences with your work and studies.

When it comes to computers, the products from Hewlett-Packard (HP) are considered as one of the most reliable. For the past several years, HP has been known as a leader in the computer industry thus you can be sure that this company knows what it is doing. The introduction of the HP pavilion in the middle of the 1990s is one of the landmarks of this company. The HP pavilion especially the HP Pavilion Notebook PCs and the HP Pavilion Slimline which were designed to work perfectly with the mobile products of HP, became an instant hit when they were first introduced into the market. However, since the HP pavilion line of products has expanded considerably over the years, there are now a variety of choices when it comes to this line of products. To make sure that you get the right type of HP pavilion, here are some pointers for you to consider.

### The Capacity Of the Computer

The first thing that you will need to look into when choosing an HP pavilion is

the capacity of this computer to handle multiple applications at once. If you are busy person who love to multi-task, it would be better for you to get a computer that will allow you to open spreadsheets, documents and presentation materials while letting you play your favorite music. On the other hand, if you belong the super bust category of people who cannot spare time to wait for their computers to shift from one task to another, get something that will allow you to perform several task at the same time such as opening spreadsheets and database, doing complex graphics, internet browsing, entertainment applications and others.

### Portability of the Computer

Since most of us are always on the go nowadays, you will need a computer that will allow you maximum flexibility of movements. If you are one of those people who frequently travel, HP pavilion notebook PCs that weigh not more 4.5 lbs would be idea for you. Since these types of computers are small and lightweight, they usually come with small monitors. On the other hand, if you do not really move around much or if you expect to travel only short distance, HP pavilion notebook PCs that weigh around 4.0 to 6.0 lbs will do nicely. The good news about these types of laptops is that they usually have bigger monitors and will allow you better viewing compared to the smaller computers.
