

Title:

Converting FAT32 to NTFS

Word Count:

112

Summary:

These instruction will assist you in converting the C: partition from FAT32 to NTFS. If you wish to convert another partition instead, just use that drive letter instead of C: while following these instructions.

Keywords:

FAT32, NTFS

Article Body:

These instruction will assist you in converting the C: partition from FAT32 to NTFS. If you wish to convert another partition instead, just use that drive letter instead of C: while following these instructions.

1. First, back up your data. The conversion process almost always works flawlessly, but there is no point in taking the risk.
2. Click the <Start> button.
3. Click <Run>.
4. Enter "cmd" into the text field labeled "Open".
5. Click the <OK> button.
6. Enter the command "vol c:" to find the volume label for the C: partition.
7. Enter the command "convert c: /fs:ntfs" to convert the C: partition from FAT32 to NTFS.
8. When prompted, enter the volume label for the partition.
