Article Body:

Information technology news and technical information pertaining to certification intelligence for exam training is the main purpose of this article. Many people do not know the difference between computer training and certification exam training. I would like to inform everyone what the differences are. Computer training is classroom education with scheduled courses or online training about the career field pertaining to information technology. Let me explain! You may want to become a Server Administrator. To begin with you will need some education somewhere in order to be knowledgeable about the subject and maybe acquire a 2 or 4-year degree or receive some online training with a qualified instructor. You may just want to take a few courses and receive a certificate in this field. This would be considered computer training.

Information technology certification intelligence on exam training is what you need in order to be fully prepared to pass your certification exam. After computer training you may have a degree or a certificate but you still do not have a certification that is recognized by Microsoft, CIW and CompTia or any other. If you have computer training that qualifies you to be a Server Administrator then you will want to get certified in Microsoft, CIW or CISCO. Certification exam training concentrates on preparing you to pass your certification exam. An IT Certification exam is unlike any other exam that you have had in college or school. There are two very important things to consider

when preparing for a certification exam. They are the proper study technique and having relevant material that pertains to the actual exam that is up to date with the current market.

There are only a handful of places online that offer Certification exam training. The reason I wrote this article is to provide news and information about the best resources on certification exam training. There are many students of information technology that want this information because they are serious about passing their certification exam on the very first try. This article is not about selling but about helping those who are not informed about Certification exam training.

Another purpose of this article is education concerning information technology certification. There are many colleges and online training about information technology that will prepare you for a particular subject or field but there are but a few places where you can find information technology certification intelligence on exam training.

Say you want to become a PC Technician and you study at a college or receive online training so that you are knowledgeable about that field and receive a diploma or certificate in that area but you still are not certified until you take a certification exam. Even after graduation you will need to schedule an IT certification exam with prometric or pearsonvue in order to be certified in the field that you desire.

How many places do you know where you can get training on how to pass your information technology certification exam. Exam training is not the same as computer training. You will need knowledge of how to study for your certification exam and to know the proper study techniques because an IT exam is not the same as the exams in school. You will also need to know where to get updated material about your certification exam because if you are studying material that is outdated then you will not pass your certification exam. Certification exam training is important if you plan on passing your certification exam the first time so you can avoid 2nd and 3rd exam fees.

Some people may already be working on the job in the profession that they desire, such as a Server Administrator, Desktop Support Technician or a PC Repair Technician. They may have had prior training before employment but have never acquired a certification. They probably know their job and are very knowledgeable about their work and field but need a certification because their employer requires it. They do not need any computer training. They only need Certification exam training so they can pass their certification exam. I hope you get the picture now. Looking for a great resource then visit: billnaugle.com
