

## Child Hearing Protection

It is necessary to protect a child's hearing. Using the hearing ability, a child is able to socialize and communicate and develop a good relationship. If you are really serious about protecting your child's hearing then you should the following things: You should considerably reduce the volume of your TV, stereo and radio.

When a child is in noisy surroundings then the child should use a hearing protection. Places such as cinemas, motor races and rock concerts make a lot of noise; hence, hearing protection is a must. When a child is near chain saws and law makers, then also he or she should wear a hearing protection.

Understanding normal speech becomes a difficult task for children who have hearing impairments. If your children are ignorant about effects and causes of hearing loss then you should make them aware of it.

It is very necessary that children wear protection when participating in outdoor games such as fencing, boxing, football, rugby and ice hockey. Proper protective equipment is a must while playing these sports. Negligence may damage your child's ear.

There are many hearing devices available in the market that is extremely useful in child hearing protection.

A child's ears are delicate; hence, child hearing protection is a must. In order to remove wax, you should take the help of soft cotton swabs, cotton wool or your fingers. All foreign objects must be kept away from your children. If you suspect something wrong in your child's hearing ability then contact the doctor immediately.

You should that your child's ears are protected from environmental elements such as snow, rain, heat and wind. You children should wear hats when walking under hot sun, especially during summers. Ear muff is another option to protect your child's ears. Wearing ear plugs when attending rock concert can protect your ear from loud noise.

Some hearing diseases are responsible for child hearing protection. Diseases such as glue ears and otitis media may damage your child's hearing ability. A common cause of hearing impairment in children is excessive noise. Undesirable sound is noise. Noise can be harmful to your child's ear. In fact children should not be allowed to visit places where the noise levels are high.

Child infections such as chickenpox, measles or meningitis may be responsible

for hearing loss. Certain medicines such as antibiotic streptomycin can cause hearing loss.

In some cases a physical child abuse is responsible for hearing impairment. In order to protect children from physical abuse child protection laws are being strictly implemented. A physical child abuse is considered a serious offence. Stringent action will be taken against those involved in it.

Today punishing children physically in schools is considered a crime. A severe child abuse may lead to permanent hearing damage. A permanent hearing damage has no medicine. Surgery cannot repair it. A hearing aid cannot restore your child's hearing ability. A child's ears are delicate, hence physical child abuse is not recommended.

An ear injury to a child that is caused by a physical child abuse may lead to permanent damage. Child hearing protection is necessary for the benefit of the child.
