**Article Body:**

To earn the Microsoft certified systems engineer certification and to prove expertise in designing and implementation of the infrastructure for business solutions based on the Microsoft Windows 2003 platform and Microsoft Windows Server system, MCSE exam is the best medium.

MCSE exam is held to improve the expertise in designing and implementing Windows Server 2003 and other issues related to it. In order to take an MCSE exam one needs to go through a fourteen-day MCSE training boot camp that helps in successfully becoming an MCSE. They use custom developed curriculum that is designed to provide both exam preparation and practical technology skills, ensuring that the examinee shall be ready for the performance based testing Microsoft has introduced in their certification programs. Experience instructors have been arranged who possess many years of experience of working with Microsoft operating system and technologies both in the field and in the classroom.

Computer labs are designed using genuine PC technology, which provides each student having the ability to access various Microsoft operating systems simultaneously on their desktop. Due to this facility provided for MCSE exam, students can access any time to practice for the exam throughout in order to maintain their progress and determine the areas that require further study of

those Microsoft operating systems.

Different kinds of resources are provided to both students and instructors under this boot camp while preparing for MCSE exam. These resources are based on web and also distribute them after and before the classroom session so that both of them can share information. The online forum assists them to analyze different methods of programming. These centers are available for obtaining the certification goals. Pre-class preparation is essential to ensure complete success in an MCSE exam.

In the beginning materials and instructions are handed out which define as to how to prepare for the exam. In addition to this, as earlier mentioned one gets to access online resources, which provide detailed course information, and additional preparation resources. These resources related to the discussion forums and private questions posed to the instructors also help in preparing for the MCSE exam as they help in clearing doubts and difficulties.

The boot camp for MCSE exam is set up to ensure the success rate for the examinees as well to prepare them before beginning of the classes. One testing voucher per MCSE exam is included with the course material. It ensures that the examinee is not misled. The limitation for the MCSE exam is provided during the class. Cost of retaking is borne by the examinee in case if he is unable to appear on the scheduled date. Also, if one feels that he would not be ready to take one or more exam during the boot camp then vouchers are handed out to enable the examinee to take the exam at a later date. This course can be retaken at free of cost but the testing fee and the courseware fee is not included. The validity for retaking the exams stands for six months.

The candidates should have at least one year of experience in using Windows NT, Windows 2000 Server or Windows 2003 server in a networking environment to be eligible to attend the boot camp for the MCSE exam. Along with this there are several other pre-requisites for taking the exam. The candidate should have the knowledge of general networking concepts, IP addressing and sub-netting Active Directory Networking services. This gives the opportunity to brush up on technology skills and fill in any gaps in the knowledge base.
