**Keywords:**

Colocation, Colocation Hosting, Data Center Colocation, Colocation Services, Colocation Service Provider, Data Centre Solutions UK, Data Centre Colocation, Data Centre Disaster Recovery, Data Disaster

**Article Body:**

Get your confidential data secured with the help of fully automated back up. Such automated back ups can eliminate the need for traditional tape based back up solutions. Data is stored in remote mirrored locations for resilience. If the back-up is too large to transfer over the available bandwidth, a snapshot is created and saved to a physical device, which is then uploaded to the back-up platform.

**Data back up and Recovery!**

The backup process starts after the installation and registration of backup software on the user's system. The backup process automatically detects important data files that are located anywhere on your hard disk and creates a backup set. You can fine-tune your backup set by adding and deselecting files and folders.

Back ups are quick and efficient, even over a dial up connection!

After the file selection is made you can initiate the backup process at any time. The initial backup will be the most time consuming since you must transfer all of your files to the data center. Online backup process has features such as Send-Once technology and file compression to perform this transfer as efficiently as possible. Easy backup utility unlike the conventional back up makes your backup process quick and very easy to perform. The Backup Solution software can store multiple versions of each file backed up during the last three months. This backup restore utility allows you to quickly restore a prior version of a file if an accident occurs overwriting a file template without

changing the name.

Our scheduled, unattended backup process assures that backup occurs regularly and with certainty. Our backup software is smart enough to tune the backup process, it can happen automatically on a schedule, can be initiated by the users, or can be configured to occur in the background whenever a traveling computer is connected to the Internet.

What happens in case of emergency?

If data from your computer, laptop, PDA or mobile phone is ever lost, stolen or corrupted, Data back up and recovery ensures that there is always a current copy available for immediate retrieval. All you have to do is simply select the data you want to restore, be it a single document, digital photos, music files or your entire hard drive, then select OK and watch a copy instantly return to your computer. It's that easy. Such data back up services automatically archives 30 previous copies of your data, so if you ever get a virus, you can go back in time and retrieve a clean copy that was made before the attack. Try online to find out how you can get your data recovered on time.
