

## Free Spyware Scan

### The 3 Hows of Free Spyware Scan

If your world revolves around your computer, then you definitely need to avail of free spyware scan. Why? Simple because this would help save and protect all your files from unwanted intruders such as viruses.

A lot of people today are relying on their computers to save all important information. In addition, many companies have done away with saving files on papers. And why not? When all people have to do is click on their mouse to find what they are looking for. The good thing with computers is that you can store years of information and be confident that they will not be tainted with time.

But then, even technology cannot prevent the spread of virus or unwanted access to these files. It seems that the geniuses behind computers have found it equal in the minds of those who can break through firewalls and other protective measures.

How do you know if you have spyware in your computer?

You will know that you have spyware on your computer when:

1. Pop ups are popping up on your screen event if you are not online.
2. Toolbars are randomly added to your browser even if you do not remember putting them there in the first place.
3. Your computer appears to have a mind of its own or is functioning like crazy.
4. The performance has suddenly turned dull or slow.
5. It starts freezing up and restarting on its own.

When you are experiencing one or two of these signs, then it would be the best time for you to avail of spyware scan. There are many kinds to choose from. It does not matter one bit if they are expensive or not. What matters is that they can do the work required of them. You can start off with free spyware scans that some companies are offering as a trial.

How do you remove spyware?

Free spyware scans can double as spyware removers. This is done through the use

of the software that comes with each spyware scan. You do not need buy this software. Most free spyware scans can be upgraded to removers. All you have to do is pay an extra amount to avail of the offer.

The spyware software will trace and get to the bottom of the problem that is causing havoc to your computer. Once it is detected, it will be removed instantly and easily.

How do you prevent spyware?

There is no warning when spyware will attack your computer. This is the reason why you need to be extra careful about the sites that you visit. Not only that, you also need to consider the things that you are downloading. If you are not sure of their sources, be wary about saving them in your computer.

Spywares are very clever. You may not even be aware that you already have them until there comes a time that your files start acting strange.

To be on the cautious side, there are anti-spyware software you can have on your computer to prevent the appearance of these intruders. If it is too late to get one, you have the option of free spyware scan that you can get online or from your trusted computer provider.

Arm yourself with enough knowledge about spyware and free spyware scan so you will not add to the number of those who have lost valuable data and files. It is better to be prepared than to be sorry.
