Article Body:

If you need a phone service and you just cannot justify paying your local phone service prices. You might be better off with a voiP provider that offers you a phone service with an affordable price. Here are just a few of the higher rated voiP providers:

- Skype
- NiteVoiP
- VoiP.com
- Broadband Telephony Systems

When you look at all the top rated providers, you will find that they have excellent calling plans, 24/7 customer service and call forwarding with the ability to conference call. The voiP providers will provide you many options that may not be available on your regular phone service as well.

International calling might be something you or your company needs. If so, look

either for a top provider that offers these calls free or for a small fee. The price of the calls is what will sell you on the voIP provider plans. Some do have unlimited calling free to certain international areas. You might want to look for a voIP provider that has a plan that includes this option. Some internet providers also offer voIP services without charging another fee. This option is only advisable if you trust your provider and plan to keep them and not change to another one in the near future.

Many people and businesses find voIP providers that offer discounts more than a savings, but also a provider that wants to help the customer. If you need assurances before selecting a voIP provider, then you can always do more research online to find out about their reputation and dedication to serving the needs of the consumer. When you choose a voIP provider, make the right choice that can meet your needs, some plans lock you in for a certain amount of time and you cannot leave them until your contract is up.
