audio, visual, music, movies, mix, create

Article Body:

What do you use your computer for? Long gone are the days when the computer was strictly a data processing tools. Today, the computer is an all-purpose media entertainment center. Its capabilities have gone far beyond keeping a catalog of all your movies and music - it's even gone beyond playing all your favorite music and movies. These days, with the right tools you can splice, cut, record, edit, mix, create and publish your own media. And to accompany the new capabilities there's a dizzying array of new software tools that can help you do everything from rip CDs to encode complete animations and videos. How do you find the best new software tools?

Enter www.audio-video-tools.com, one of the fastest growing download sites for audio and video software. Just like their name says, the site is all about the software that you need to do everything you want with anything audio or video. This is not just another software directory. www.audio-video-tools.com lists powerful audio and video tools in 14 different categories from CD rippers to cell phone utilities. Whether you want to do something as simple as convert a wav to an mp3 or as complex as create a full-length video from scratch, you'll find the tools you need to do it at audio-video-tools.com.

And you'll find them easily. There's no need to wade through page after page of directory structure. You can search all categories from the front page on the site, or click on a category to go directly to browsing that category. You'll find video editors, audio editors, CD rippers, imaging software, video and audio

converters, complete all-in-one packages and more. There are shareware listings, commercial listings and freeware listings - in short, just about everything you'd ever want to play with your media.

Each listing includes a capsule description and a full review as well as a side box that lists all the important details about the software - including both a staff and user rating, and the chance to enter your own rating. The categories include All-in-One, Media Players, CD Rippers, CD Burners, Converters, DVD software, Editors, ID3 Tag Editors, Mobile Phone Tools, Plugins, Radio and Broadcasting (plogcasting, anyone?), Recorders, Utilities and Voice and Text editors.

The reviews are comprehensive, listing all the capabilities of each software package and how well it performs each function. It's a nice bonus that's not often found on pure directories.

For software publishers, audio-video-tools.com offers multiple opportunities for exposure. There's an easy submission tool to add a free listing of you audio or video software, and many different ways to increase the exposure of your listing at very reasonable rates. You can opt for a featured listing, front page exposure, top level search results, footer text links and more.

Among the most popular software featured at audio-video-tools.com is Blaze Media Pro, the popular powerhouse all-in-one media tool that converts between all available video and audio formats .Rip, burn, convert, edit, capture, create, extract and combine files to create your own unique media.

www.audio-video-tools.com is a young and growing directory with a lot of promise. The directory structure is easy to follow and intuitive, the reviews and descriptions complete enough to intrigue and the array of features for software publishers wide enough to attract the best tools the net has to offer. If you need the tools to do absolutely anything with media files, this is the place to find the tools that you need.
