501

## Summary:

If you buy a new computer these days, you want a Internet that has some speed. Satellite Internet service is the way for people to have the speed they need for that new computer.

## Keywords:

Satellite Internet Service, Satellite Internet Speed

## Article Body:

Dial up is the slowest way to connect to the Internet for people who do not have access to DSL or cable. The fact is that people in rural areas are not connecting with cable or DSL because the services do not extend that far out of local areas. This is frustrating for people who need to work at home or have a need for a fast computer. If you buy a new computer these days, you want a Internet that has some speed. Satellite Internet service is the way for people to have the speed they need for that new computer.

When you buy a computer that has everything you want and need, you want to be able to use it in a way it was designed for, fast connections for downloading and uploading. Many rural residents with lightening fast satellite Internet service have replaced dial up and are reaching the potential of their computers. The speeds are faster than cable or DSL and allow you to do more things online that you could not do with dial up, cable or DSL. With satellite high-speed Internet, you are always connected to the Internet, therefore there is no waiting to connect.

People who live in cities or rural areas that want to use Voip as their phone will need DSL or high-speed Internet to use this service. If you use the Internet Voip phone system, a high-speed connection is the only way to use the phone system in real time. This is just another reason for people to have a satellite Internet service. You will find that many satellite services are following Hugesnet and offering their high-speed Internet connections. If they can match up speed wise, they are a good bargain. The only thing you have to consider is the connection speed, downloading and uploading times.

The best thing to do before selecting a satellite Internet service is to compare

speed charts for downloads and uploads. If you would choose a service that is priced cheaper than another service, you may find out that the service is a little less than what you could get somewhere else. You also need to select a satellite service that gives you good television service. Some companies do not have reliable reception in certain areas or weather conditions. This has to be a consideration as well when deciding on the type of Internet satellite you want to have in your home.

High-speed satellite Internet service is nice to have if it works all the time. Dropped signals are rare with some providers, but are common with other providers. Since you need something reliable, you have to compare and maybe even check with neighbors to see if they have satellite to see if they have a preference for a specific provider. You want to have a fast connection and reliable service to use your computer the way it should be used. Nothing less than fast will give you the true benefits of the newer computers today.
