LCD TV PC MONITOR

**Article Body:**

An LCD TV pc monitor is now becoming a must have gadget for tech and multimedia enthusiasts. You can now work on your documents and switch to your favorite TV shows on the same screen. In short you can both do your work and leisure with just one sitting. Enjoying multimedia technology has never been this easy.

Before, in order to watch TV on your LCD monitors requires some addition of hardware and software reconfiguration. You need to have some special cables to connect your pc to your LCD or converters to watch your favorite shows. You may even have a technician to set-up things for you. But nowadays, LCD monitor models already come complete with everything you would need to start combining work and leisure in one screen. Gone were the days when you were compelled to buy separate computer and entertainment systems. An LCD TV PC monitor allows you to de-clutter your workspace by replacing everything with just one system. The newest LCD TV PC monitor models already come with built in TV tuners for your watching convenience. They also allow picture in picture functionality which makes it easy to work on two or more tasks at the same time. You can move the TV program feed to one corner of the screen while going through your emails or checking on the latest stock quotes on the Internet.

This new innovation in technology also benefits extreme gamers who want every detail and color of the game accounted for. Gaming enthusiasts will also enjoy

their online games with the bigger screen that an LCD TV PC monitor offers without sacrificing reaction times. The best models in the market come with as little as 5 millisecond response times and 170 degrees horizontal and vertical viewing angles. Most of these models are naturally HDTV ready for your viewing pleasure. It also doesn't hurt that they also have remarkable built-in speakers that gives out the illusion of 3D sound.

LCD TV PC monitor is not only great on detail and functionality but also efficient. Getting an LCD TV PC monitor is a practical investment if you're the type of person who needs to work on both the computer and the TV set at the same time. This gadget makes media monitoring for say, PR officers, much more convenient.

While trying to sort out emails or looking through the Internet for specific information, they can watch the news at the same time.

Much can be said about the merits of an LCD TV PC monitor. You can save as much space and money that you'll end up saving if you're going to get one. You can finally do away with all the other separate gadgets that are cramping your space and decrease your power consumption in the process. In the long run, it's still practical to get yourself an LCD TV PC monitor for your home or office.

If you're planning to buy one, it is a good idea to look for the available LCD's in the internet. This is beneficial because you can compare prices and specs in real time and there are also sites that offer you there own comparison. What to look for in buying one? Well, the first you should consider is the quality and functionality that best suits your budget. You may also want to have LCD with complete extension ports so that you can connect it to almost anything you want and that can be upgraded if you want to add more speakers in the future.
