map of Europe, satellite map, map driving direction, map of Rome, map of Italy,
USA map, map of Germany, map of china, ma

Article Body:
OnionMap.com was first created in 2003 by an avid traveler and spatial analyst
named Young Kim in South Korea. After years of research and development, co-
founder Xochitl Hwang adopted this concept and has been involved in global
marketing and sales ever since

Over the years, Onionmap.com has established partnerships with Yahoo! Korea,
Asiana Airlines, and emerging city tourism bureaus. Onionmap.com's vision is to
radically change the internet with a website that features three-dimensional
(3D) replicas of world famous cities where user-generated content will combine
real-time interaction with Internet services and informational web sites.

Currently, Onionmap.com offers a visually superior, user-friendly 3D platform of
over 33 major cities around the world. Its advanced 3D mapping technology and
design functionality provides optimized realistic platform for User Created
Content (UCC) and allows immediate integration of outside website information
that will guarantee the flexibility to expand to virtually unlimited online
transactions.

Onionmap.com's goal is to contain and provide extensive real time information
about the city's unique place of interests, restaurants, hotels, events, etc.,
while allowing users to make reservations and directly create content of their
own through Onionmap.com's blogs (a.k.a PLOGS) feature, which is also connected
with the social network features called MapID. OnionMap.com's combine features
will build a complete and new portal site. It will set the trend and replace
current models of conventional search engines providing more enjoyable and rich

experience and create a strong online community with a local focus. It will capitalize on the unparalleled advantage of being the first-mover in creating a visual 'information ecosystem' in a manner similar to the different layers of an onion. You can search and find the most current and exact information, as you peel off the layers in onionmap.com.
