Title:
Watch Your Business From Anywhere in the World

Word Count:
241

Summary:
When most people think of video surveillance, they think of cameras in stores.

But many businesses are using them to keep track of meetings and ensure clients
and business associates stand behind their word. Cameras can also provide proof
of wrongdoing, connecting the dots when people are where they shouldn't be.

Keywords:

Article Body:
When most people think of video surveillance, they think of cameras in stores.

But many businesses are using them to keep track of meetings and ensure clients
and business associates stand behind their word. Cameras can also provide proof
of wrongdoing, connecting the dots when people are where they shouldn't be.

At anytime and in any place you can't watch, a camera can. Many surveillance
systems offer remote accessibility. This option allows people to see what is
going on from their PC or laptop, whether they are across town or in a hotel
room across an ocean.

CCS International (OTC BB: SITG) is one of the most well-known makers of
surveillance equipment. Its video surveillance systems can monitor, record and
broadcast real-life conditions to ensure peace of mind.

CCS video systems can be either covert or overt. Covert video does not allow
subjects to know they are under surveillance, while overt video does.

Video images are an invaluable tool for companies, whether they are used to help
protect against theft and sabotage, or merely to keep an eye on warehouse
operations.

The Spy Line-4 from CCS International, for instance, can be set up in a variety
of settings - stores, factories, warehouses, board rooms or even in a home

office - and can be accessed and controlled from a remote personal computer.

This video security system is available in color and with audio and can transmit high-quality compressed video images from four cameras.
