Article Body:
MP3 or MPEG- Audio Layer 3 has become the most popular form of music because of its ability of compressing music data files without changing the original data. This takes less storage space and provides with the same quality of sound as that of the original music. Today, when digital music has overtaken the whole music business, mp3 is doing very well.

Is Mp3 music the future?

MP3 has solved the biggest problem of consumer who used to buy whole album of a sound track even though they want to listen one song. Now mp3 encoded audio has made it possible whereby different song files could be compressed in mp3 format incorporated in a cd. You can download these free mp3 song or purchase them and listen almost the same quality of music sound.

Earlier there was not any source to copy music files, later music cassettes paved the way of recording music and became popular. Then cd was used widely because of the digital sound quality which improved to a great extent. Mp3 is the used nowadays, because they provide more song data and are available at much less costs. Not only this, to listen these MP3 songs you should have your cd or audio player compatible to that or you need to have a Mp3 player. Mp3 player is basically made to play mp3 data files. It also supports mp3 songs to be directly downloaded. These players are portable and therefore could be carried by music lovers wherever they go.

The best thing is that you don't lose the sound quality in mp3 songs and get easy access to the kind of music you like anytime.
