Title:
The modding.

Word Count:
335

Summary:
The computer design could be discussed for hours - it is almost the same as
talking about art. Throughout history, the mankind has sought for a diversity of
the surroundings. It is a commendable zeal, I hasten to say. So, with the advent
of home and office computers, a new problem appeared. Your may not believe but
it concerns the design of computer case.

Keywords:
silent PC, silent computer, modding

Article Body:
The computer design could be discussed for hours - it is almost the same as
talking about art. Throughout history, the mankind has sought for a diversity of
the surroundings. It is a commendable zeal, I hasten to say. So, with the advent
of home and office computers, a new problem appeared. Your may not believe but
it concerns the design of computer case.

In the late 20th century, the computer case represented a uniform gray
box with a monitor over it like some leader bust. This can not go on forever…
and modding appears to help those who are unsatisfied. Modding is a vocation of
home masters who can keep an instrument in the hands and who got tired of
beloved computer serial design.

Modders, this is what modding-lovers are called, are actively
introducing new self-designed and homemade computer cases, invent new
technologies and approaches to make their unique home computers so that they
will stand out from the crowd and enjoy possessing an exclusive computer with
heretofore unseen features, forms, etc., i.e. a real modding thing.

Any modding computer consists of main serial units and components, whose
appearance and features are developed and upgraded. Modding concerns not only
the outer parameters of computer hardware, but also the complex technical
modernizations, such as an increased processor speed, RAM starting, etc.

Great success is a silent computer, i.e. the noiseless computer that has

removed headache of many PC owners and allowed them sleeping at night. No modding project goes without backlighting, whose halogen illumination makes mysterious any project, emphasizes the dignity of excellent design and hides minor shortcomings and constructive lacks.

An excellent contribution to any modding makes Airbrush. This is a specific trend, a way to draw with acrylic nitroenamel paints on the computer hardware using a miniature sprayer - aerograph. The computer decorated by the master will look so wonderful that people can not forget it. So, if you get interested in modding or want to do something by yourselves, visit our site.
